- Optional battery, solar and mains operation
- Various mounting options
- FREE PC based software tools
- Comprehensive support
- Designed and manufactured with pride in the UK

QMS<sup>®</sup>  
ISO 9001  
REGISTERED

## The cost effective tool for improving road and site safety

PTSC 905 vehicle activated, radar speed sign with large 'SLOW DOWN' legend

Health and safety is now a primary concern for anybody operating sites where vehicles are in use. Traditional, fixed signs can be easily ignored and ensuring that vehicles keep to the prescribed limit can present a difficult task.

The large digit display makes it plain for the driver and all around, to see that the speed limit has been exceeded or otherwise, the psychological impact is that drivers tend to reduce their speed to keep within the prescribed limits.

Customer observation suggests that each of our SpeedChecker signs has an instant effect on this problem by providing drivers with visual feedback, should they break the speed limit, both on a site or on the roadside.

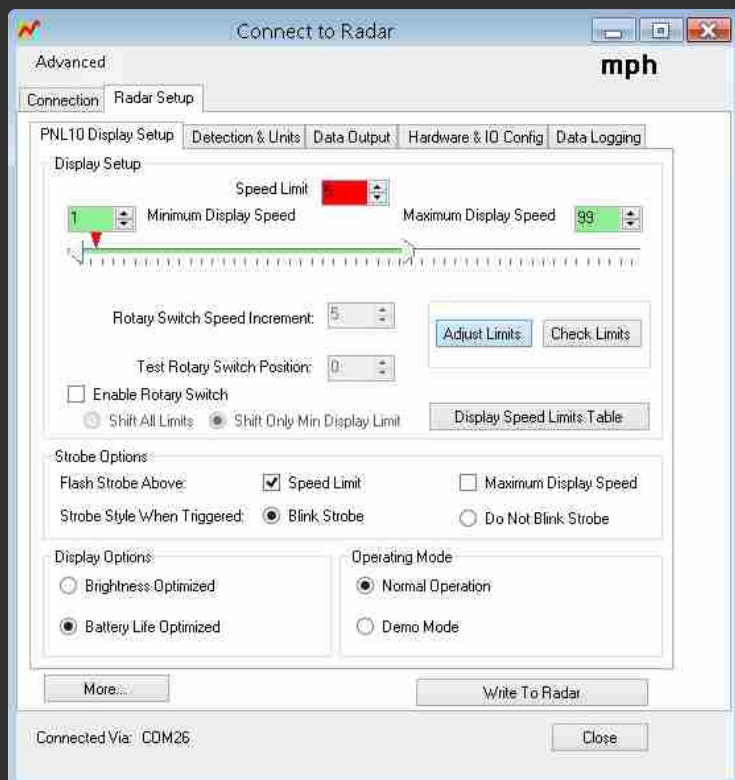

Our radar speed signs are user configurable and provided with easy to use software tools to perform these operations via USB connection, along with a full and comprehensive manual to help guide you through the process of installation.

Our devices have been designed by our in house engineering team and are manufactured in the UK in our own facilities, allowing us to have an excellent knowledge of all of our products, along with full comprehensive support.

Furthermore, we are an ISO 9001 (2015) registered company, established in 1984.

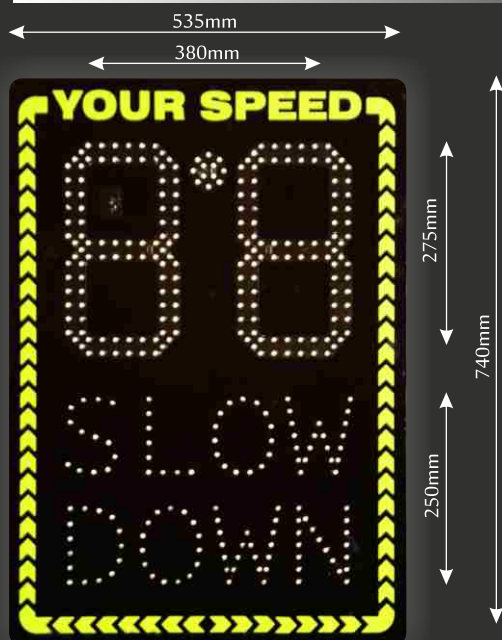

# SPECIFICATION

## Graphic Interface

## Display Dimensions

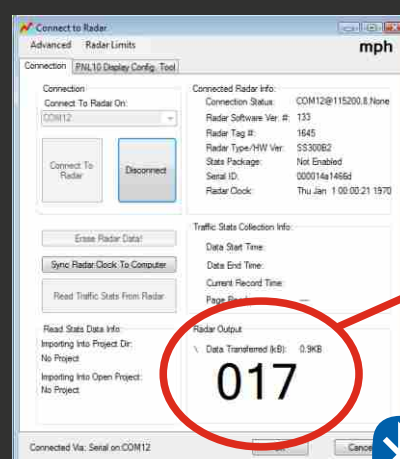

## Device Configuration

### 1. Device Configuration

The software provides a simple means of configuring the device during installation, changes to the configuration are applied in real time.

### 2. Cross Platform

Runs under Windows XP/Vista/7/8/10

Constantly updating speed output transmitted to the remote computer via optional Bluetooth signal.

## Viewing Distances
