SiteSentry
ANPR SPEED CAMERA

SiteSentry ANPR Speed Camera

The SiteSentry Automatic Number Plate Recognition speed camera is ideal for industrial and private sites where traffic surveillance is required.
Whether a log of visiting vehicles is needed, or a record for observation of vehicle speed onsite, in order to be compliant with modern day Health and Safety regulations, our SiteSentry ANPR Speed Camera is the perfect solution.

Full ANPR and speed measurement are combined with a hi-res 1080p video stream of all vehicle events, in both directions adjacent to the camera.
The gathered information can be searched on the systems data base by one or a combination of criteria, ie, part of a vehicle registration plate, further filtered by date. This information, once located as a stored video stream may then be downloaded for further scrutiny in either still, or video form.

The system requirements are simply: a post to fit to, mains electrical supply and a device to set up and read the data from such as a laptop with wifi connectivity.

Super HiRes 1080p video playback showing speed, registration, time, date, direction & location

Please note there is a 5-10s delay on this feed
